REDBELLY NETWORK DAO

Community Task Board Initiative

Submitted by	njay (@njaybby on Discord)
Wallet	0x9d7a5e8bfff5eab6368ecd2d447090cce01b4332
Working Group	Community (Primary) · Marketing · Research · Builders
Date Submitted	February 2026
Vote Date	TBD

Contributors

This proposal was developed collaboratively. Compiled and structured by njay, built on ideas and contributions from Godwin, Debanked, Benny, Buffy, Rainbow and other DAO members

Summary

This proposal establishes a structured community task board system leveraging the existing DAO website infrastructure, enabling members to contribute meaningfully through documentation, research, development, content creation, and ecosystem building while earning RBNT-denominated rewards that align long-term incentives with network growth.

Problem & Rationale

• Current Challenge

The Redbelly DAO currently lacks a systematic way for skilled community members to contribute and earn recognition. While the DAO treasury holds substantial resources, there is no clear, structured pathway for contributors beyond occasional large proposals.

• Specific Gaps

- No structured audit loop for DAO-internal developer work. Developers who build infrastructure for the DAO have no formal platform to submit it for peer review, testing, or security validation
- Limited documentation and tutorials for new builders and institutions
- Missing competitive intelligence and market research infrastructure
- Inconsistent community engagement and content quality standards
- No established ecosystem resource library (compliance templates, integration guides, use cases)

- **Impact if Unaddressed**
  - Slower ecosystem growth due to high onboarding friction
  - Underutilized community talent and expertise
  - Continued dependency on core team for all documentation and support
  - Missed opportunities for early bug detection and security improvements
  - Competitive disadvantage as other L1s build comprehensive developer resources

Objectives & Strategic Fit

- **Primary Objectives**
  - Build Compounding Infrastructure: Create reusable documentation, tools, and templates that serve the ecosystem for years
  - Systematic Security: Establish ongoing bug bounty program providing security auditing at lower cost than professional audits
  - Strategic Intelligence: Generate research and competitive analysis that informs better DAO decisions
  - Community Mobilization: Provide clear pathways for skilled contributors to add value and earn RBNT exposure
  - Ecosystem Growth: Lower barriers for institutional adoption through compliance templates and partnership infrastructure

- **Strategic Alignment with Working Groups**

Community WG (Primary)
  - Task management and quality control systems
  - Community support tasks across platforms (Discord, X, Telegram, and others) with defined validation criteria for completed work
  - Educational session coordination
  - Reputation and progression tracking

Marketing WG (Secondary)
  - Content creation tasks (infographics, videos, case studies)
  - Scout role for ecosystem content aggregation
  - Social media amplification and brand awareness

Research WG (Secondary)
  - Competitive intelligence and market analysis
  - Regulatory landscape tracking
  - RWA market research by vertical
  - Project Acacia analysis (time-sensitive, Q1 2026)

Developers/Builders WG (Secondary)
  - Smart contract templates and developer tools
  - Bug bounty security program (governed separately from standard developer tasks)
  - Integration guides and technical documentation

- Testing frameworks and CI/CD templates

- **Alignment with DAO-Wide Goals**
  - ✓ Adoption: Documentation and tutorials reduce onboarding friction for new developers
  - ✓ Awareness: Content creation and case studies increase institutional visibility
  - ✓ Infrastructure Growth: Developer tools and templates accelerate building on Redbelly
  - ✓ Token Utility: RBNT-denominated rewards create holding incentive and ecosystem alignment
  - ✓ Decentralization: Distributed task completion reduces core team dependency

Scope of Work & Deliverables

Six task categories cover the full spectrum of community contribution:

Category A Documentation & Tutorials

Clear documentation is the foundation of developer adoption. Every tutorial created reduces onboarding friction and support burden.

- Video tutorial: "Deploy Your First Smart Contract on Redbelly"
- Guide: "Integrating Eligibility SDK Step-by-Step"
- "Using Receptor Verifiable Credentials in Practice"
- "Onboarding Ethereum Devs to Redbelly-Specific Features" (note: Redbelly is EVM-compatible, so this covers what's unique: the compliance layer, Receptor eligibility checks, and verifiable credentials

Payment: **100% RBNT**

Category B Content & Community

Visual content and community engagement build brand awareness and make complex concepts accessible.

- Infographic: "How Redbelly DBFT Consensus Works"
- Case study: Interview with RWA asset issuer (Raze Finance, etc.)
- Educational Twitter threads on compliance and RWA tokenization
- Scout Role: Daily scanning and weekly digest of ecosystem posts across all platforms

Payment: **100% RBNT (static) · 70% RBNT / 30% USDT (video)**

Category C Research & Analysis

Strategic intelligence informs better DAO decisions, identifies partnership opportunities, and keeps Redbelly competitive.

- Map all RWA projects on specific blockchains to create a database

- Project Acacia deep-dive analysis when Q1 2026 report drops (TIME-SENSITIVE)
- Institutional Showcase: official case studies for RWA, CBDC, Digital Funds use cases
- Quarterly ecosystem health reports

Payment: **100% RBNT**

Category D Developer Work

Reusable smart contract templates accelerate building on Redbelly. This category also provides a structured audit loop. DAO developers who build infrastructure can submit their work for peer review, testing and security validation by qualified community members.

- ERC-20 token template with Receptor eligibility checks
- Automated RWA dividend distribution contract
- GitHub Actions CI/CD template for Redbelly deployment
- Peer review / audit submissions for DAO-built infrastructure
- Note: Bug bounties are governed separately with their own workflow, reviewer requirements, and payout logic

Payment: **100% RBNT**

Category E Ecosystem Building

Partnership infrastructure and compliance templates remove friction for institutional adoption.

- Partnership research and outreach documents (custody, KYC, legal providers)
- Compliance template library (3+ jurisdictions)
- RWA service provider directory (30+ providers)
- Asset issuer onboarding checklist

Payment: **100% RBNT**

Category F Strategic Coordination

Coordinated learning and technical collaboration build a stronger, more aligned community.

- Monthly Education Focus Working Meeting: RWA fundamentals, tokenization economics, compliance frameworks
- Monthly Technical Focus Working Meeting: SEVM deep-dives, code review sessions, infrastructure development
- Session recordings and meeting notes shared with community

Payment: **Monthly recurring in RBNT**

Implementation Timeline

Phase 1: Pilot Program (Months 1–3)

- Weeks 1–2: Configure DAO website taskboard with categories and workflow
- Weeks 1–2: Set up Google Form for open task nominations (link pinned in #dao-chat, announced on Discord, X, and Telegram)
- Weeks 3–4: Recruit and onboard 3–5 reviewers, establish quality standards
- Month 1: Launch with 10–12 initial pilot tasks (2 per category)
- Month 2: Expand to 15–18 active tasks based on demand and quality
- Month 3: Gather feedback, iterate on pricing and processes, prepare Phase 2

Milestone 1	25+ completed tasks · 80%+ first-pass approval · 3+ active contributors · Documented lessons learned

Phase 2: Expansion (Months 4–6)

- Scale to 20–25 active tasks monthly based on Phase 1 learnings
- Officially launch bug bounty program with published scope
- Introduce reputation tiers and gamification elements
- Add specialized task tracks: security, partnerships, education

Milestone 2	60+ total completed tasks · Bug bounty operational · Reputation system live · 30% reduction in developer onboarding time (from Month 1 baseline)

Phase 3: Sustainable Operations (Months 7–12)

- Stable monthly operations with proven contributor base
- Quarterly pricing reviews and adjustments based on RBNT value
- High-performing contributors promoted to reviewer roles
- Integration of task board outputs into official Redbelly documentation

Milestone 3	150+ total completed tasks · Self-sustaining reviewer pipeline · Year-end impact report with Year 2 recommendations

Budget & Payment Structure

Budget Structure

Two separate budgets. RBNT and USDT are not interchangeable and cannot be converted between them.

Budget	Quarterly Cap	How It Works

Budget	Quarterly Cap	How It Works
RBNT	$4,500 USD equivalent	Converted to a fixed RBNT number at proposal approval using 7-day moving average · Reset each quarter · Covers all tasks except video
USDT	$500	Ring-fenced exclusively for the 30% video production component · Not used for any other task type
Total	$5,000 USD equivalent	Hard quarterly cap. Automatic pause if either budget is exhausted

The RBNT cap is expressed in USD equivalent to account for price volatility. At the start of each quarter, the USD equivalent is converted once to a fixed RBNT number using the 7-day moving average. That fixed RBNT number is the actual cap for the quarter, reviewed and reset each quarter.

• Task Payment Structure

Category	Payment Structure	Rationale
Documentation & Tutorials	100% RBNT	Pure contribution, no external costs
Content & Community (Static)	100% RBNT	No paid tools required
Content & Community (Video)	70% RBNT / 30% USDT	Software, stock assets, hosting costs
Research & Analysis	100% RBNT	No external costs beyond time
Developer Work	100% RBNT	Aligns developers with ecosystem success
Bug Bounties	100% RBNT	Security researchers become stakeholders
Ecosystem Building	100% RBNT	Partnership work, template creation
Coordination Roles	100% RBNT	Ongoing community roles

• Starting Price Ranges (Pilot Phase)

Task Type	Pilot (Months 1–3)	Scale-Up (Months 4+)
Micro tasks (social posts, graphics)	$10–20	$15–30
Documentation / tutorials	$25–50	$40–75
Video content (short)	$150–250	$200–350
Video content (long)	$250–400	$350–600
Research reports	$50–100	$75–150

Task Type	Pilot (Months 1–3)	Scale-Up (Months 4+)
Developer tools / contracts	$75–150	$100–250
Bug bounties (by severity)	$20–300	$30–500
Monthly recurring roles	$100–200	$150–300

All amounts expressed in USD equivalent, paid in RBNT at the 7-day moving average price at time of approval. Except video tasks which include a 30% USDT component.

Oversight & Accountability

Task Nomination & Proposal Rights

Task creation is open to everyone. Any DAO member or core team member can propose tasks:

- A Google Form will be set up in Phase 1 Week 1 for open task nominations from the community
- Nominations reviewed by the reviewer team and published to the board if approved
- Core team members are encouraged to propose tasks that serve ecosystem needs
- IRL event-related tasks handled through the form on a case-by-case basis with no hard allocation cap
- Form link pinned in #dao-chat and announced across Discord, X, and Telegram

Reviewer Structure

The reviewer team consists of 3–5 members across technical, content, and research domains:

- 2 Technical Reviewers: code, smart contracts, integrations
- 1-2 Content Reviewers: documentation, visuals, community content
- 1 Research Reviewer: analysis, market research, case studies

Reviewer Responsibilities

- Review task applications within 48 hours and assign to qualified applicants
- Evaluate completed deliverables against acceptance criteria within 72 hours
- Provide constructive feedback on revisions if needed
- Process approved payments within 24 hours
- Per-review payment: RBNT equivalent of $15–25 per task, scaled by task complexity. Reviewing a $10 graphic and a $300 research report should not pay the same rate

Reporting & Transparency

- Weekly Updates: dedicated #taskboard-updates Discord channel (separate from #proposals to keep governance clean)
- Monthly DAO Report: full version in Discord, summarized thread on X for public visibility, headline figures on Telegram
- Quarterly Review with DAO vote: impact assessment, pricing review, strategic direction for next quarter

- **Quality Control**
  - Every deliverable undergoes review before payment
  - One revision allowed. Second rejection means no payment + 7-day cooldown
  - Pattern of low quality (3+ rejections) = permanent task board restriction
  - Appeal process: second reviewer opinion available; third frivolous appeal = restriction

ROI & Impact Measurement

- **Key KPIs**

KPIs are split into two tiers: measurable from day one, and those requiring baseline setup in Phase 1 Week 1:

Metric	Measurable Day 1?	Pilot Target	Month 6 Target
Tasks completed / month	✓ Count closed tasks	10–12	20–30
Active contributors	✓ Unique wallets submitting work	3–5	8–12
First-pass approval rate	✓ Approved vs revised on first review	80%+	80%+
Budget spent vs cap	✓ On-chain, verifiable	Under cap	Under cap
Tutorial views	⚠ Pick analytics platform in Week 1	,	5,000+
Security findings	⚠ Assign log owner in Week 1	,	2+
Developer onboarding time	✗ Run survey in Month 1 to set baseline	Set baseline	–30% from baseline
Contributor retention	✗ Define metric first (3+ tasks across 2+ months)	Define metric	60%+

Risk & Mitigation

Risk	Likelihood	Impact	Status
Low Participation	Medium	High	→ Mitigated
Quality Control Failure	Medium	High	→ Mitigated
Budget Overrun	Medium	Medium	→ Mitigated
Reviewer Bottleneck	Low → Medium	Medium	→ Mitigated

Risk	Likelihood	Impact	Status
Gaming / Fraud	Medium	Medium	→ Mitigated
Contributor Centralization	Medium	Low–Medium	→ Mitigated
Regulatory / Compliance	Low	High	→ Mitigated

● Kill Switch Conditions

The task board automatically pauses if ANY of the following occur:

- RBNT quarterly budget ($4,500 USD equivalent) or USDT video budget ($500) exhausted
- First-pass approval rate drops below 60% for 2 consecutive months
- Fewer than 5 active contributors by end of Month 3
- Review SLA missed on >40% of tasks for 2 consecutive weeks
- 3+ serious code of conduct violations in any month
- Emergency pause proposal passes DAO vote with >50% support

Decision Requested

This proposal requests DAO approval for:

- ✓ Establishment of Community Task Board using DAO website infrastructure
- ✓ Dual budget: $4,500 USD equivalent in RBNT (fixed at approval, reset quarterly) + $500 USDT (video only) · Total: $5,000/quarter
- ✓ Payment structure defaulting to RBNT-denominated rewards (70% RBNT / 30% USDT for video tasks only)
- ✓ 3-phase rollout over 12 months with defined milestones and quarterly DAO reviews
- ✓ Appointment of initial reviewer team (to be nominated separately)
- ✓ Authorization to proceed with pilot program (Months 1–3)

YES	NO	ABSTAIN
Approve task board with proposed structure, budget, and payment terms	Reject proposal	No position

> *"By voting YES, the DAO commits to building lasting documentation, tools, and resources; systematic security auditing through bug bounties; strategic intelligence through research and analysis; and sustainable, measurable ecosystem growth , all while aligning contributor incentives with network success through RBNT-denominated rewards."*
